

# Questions about Inducing Labor

## TO DISCUSS WITH YOUR HEALTHCARE PROVIDER

Why are you suggesting induction?

What is my Bishop Score (test showing how likely it is that your cervix will dilate)?

What medication for induction will you use and what are the possible side effects to me and my baby?

What instruments will you use?

What are my options if induction does not work?

How long do you anticipate it will take from the start of induction until active labor?

How long do you try induction before recommending a cesarean birth?

What can I do in the meantime to try to start labor naturally?
